Vacuum End-Effector Systems from ANVER

The ANVER Vacuum End-Effector System for Gradall® Excavators bolts onto their standard boom extension mounting pattern, and is powered by the Gradall's own hydraulic and electrical systems to provide motorized tilt and rotation, controlled from inside the cab. Capable of lifting 8,500+ pound panels in the horizontal and vertical planes, this end-effector permits front surface final placement and removal without the use of hooks, slings, or chains.
