

Guard Houses

Made To Order

Each year millions of dollars worth of equipment, technology and products are stolen from industrial plants and warehouses. Some of this costly loss is the work of unauthorized personnel; however, some employees look at theft as part of their payment package.

Security Control

Custom designed CPS structures offers efficient, attractive and comfortable spaces that can be installed in less time, at lower costs than conventional office buildings.

Refinery Loading Control

CPS can design a structure to reflect the environment. This refinery loading control room is a non-combustible and explosion proof structure that provides 360° visibility to surrounding operations.

20 Contain Protect Shelter

Guard Houses

Security for your plant... year round comfort for your guard.

Weigh Scale

CPS Scale Houses are the core of many industrial security programs providing an efficient, climate controlled headquarters for security personnel.

Guard Houses

Our Sentinel walk-through model requires all in-coming and out-going personnel, as well as visitors to pass a security check. Walk-through buildings often have a secondary function as a fully climate controlled shipping/receiving office.
