

Plug-In Plant Offices

Giving You Advantages

Your structure can be multi-sectional to take advantage of the space available and where access may be limited. Dozens of options can be added to meet all appropriate requirements or to meet all safety codes.

When you need to get away from the noise and confusion, get into a CPS portable Plug-In plant office. A little peace and quiet for your plant management. CPS units have a long life and need minimal maintenance.

Weigh Scale Office

Office enclosures, for in-plant high noise areas or exterior plant locations, provide an attractive, maintenance free working environment.

Double Office

Using the latest in Computer Aided Design, we build portable structures for the longest life and the least amount of maintenance. These pre-wired structures are ready to be plugged into existing utilities, to ensure no construction delays. We also can provide you with fire-rated plant offices or build entirely of non-combustible materials.

Contain Protect Shelter

Mobility

CPS mobility offers many advantages over conventional construction, namely being considerably less expensive and because CPS builds in a controlled facility, a high standard of quality can be maintained. Our structures can be moved to another location on the same site or to an entirely new site. When more space is required, you can simply add another section or two.

Sound Stop

Sound Stop was developed by CPS to make our plant offices one of the most sound conditioned you can buy. In plants where high noise levels create communication problems, Sound stop is a wise and practical investment. It will pay for itself many times over in personnel efficiency, while reducing the possibility of job related hearing impairment claims.

Two-Storey Facilities

Two-storey facilities use plant space effectively and are also economical. A strong, quality built product that will give you maximum protection inside and out, against weather conditions
