

SPONGE MATTING WITH ZEDLAN™ - The unique combination of softness, support and 'bounce' makes a difference that workers feel from their toes to their productivity!

Comfort King™ with Zedlan™

CONSTRUCTION:

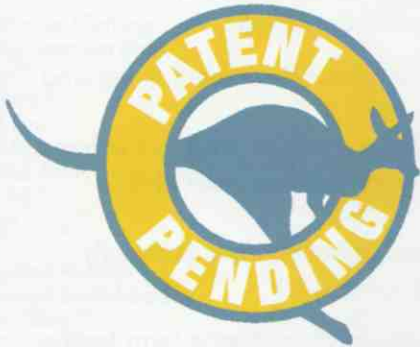

- 100% Zedlan™
- Exceptional abrasive and slip resistant pebble surface.
- Static dissipative - 10^9 .
- Bevelled edges to reduce tripping.
- Colour availability: black, steel gray or royal blue
- Size availability: Mats: 2' x 3', 3' x 4', 3' x 5', 3' x 10'
Rolls: 3', 4', 6'

FEATURES AND BENEFITS:

- Triples the resiliency of vinyl sponge & performs better than laminated anti-fatigue products in low temperatures.
- The extended durability keeps it performing twice as long as typical pebble mats and 3 times longer than ribbed surface products.
- Greater slip resistance than vinyl foams and many laminated anti-fatigue products.
- Static dissipative surface resistivity of 10^9 ohms per square makes it the product of choice for static sensitive environments.
- Improved chemical resistance.

Comfort King™
is a slip-resistant mat
that anchors to the floor!

Black, Steel Gray,
Royal Blue

A superior anti-fatigue mat must possess 'bounce-back properties' that compress and continually spring back to their original thickness even in cold temperatures or on cold floors, allowing muscles to gently flex and move.

The mat surface should have high wear resistance properties and resist slipping.

Static dissipative properties complete the perfect product.

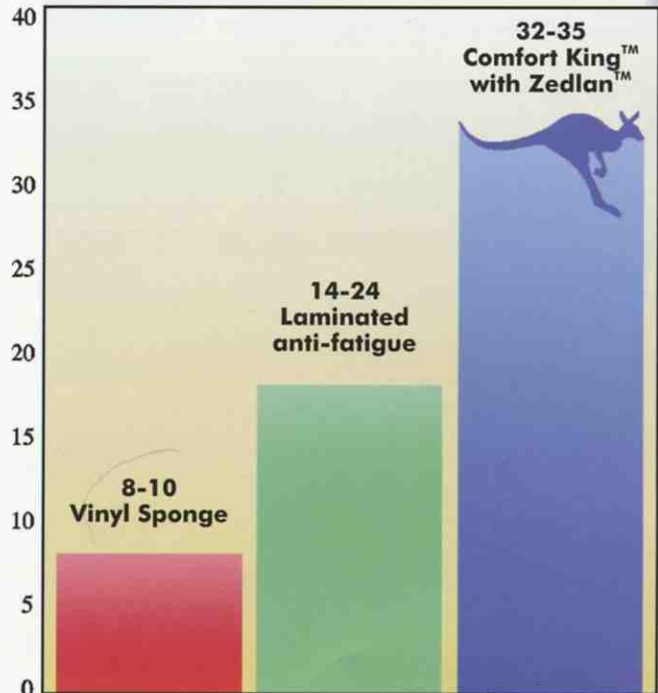

Tests show conclusive proof that Zedlan™ is the only product that meets the criteria

-  **Greater softness**
-  **Greater bounce/resilience**
-  **Greater durability**
-  **Static dissipative**
-  **Better performance in low temperatures**
-  **Greater chemical resistance**
-  **Greater slip resistance**

RESILIOMETER TEST RESULTS (ASTM D2632)

Resiliometer tests show that Comfort King™ with Zedlan™ is far and away more resilient than vinyl sponge mats. A balance of softness and 'bounce' is the essential characteristic of anti-fatigue matting.

TABER ABRADER TEST (ASTM D4060)

This test compares the abrasion or wearing down of the top surfaces within the same period of time and under identical conditions. Comfort King™ with Zedlan™ shows amazing durability. It keeps performing approximately three times as long as conventional ribbed mats. You'll save by replacing mats much less often.

Zedlan™

Pebble vinyl sponge

Ribbed vinyl sponge

2,000 cycles on a Taber Abrader leave scarcely a mark on Comfort King™ with Zedlan™. The same test causes severe damage to conventional vinyl sponge pebble and ribbed mats. ASTM D4060
